创建方块之间的转换

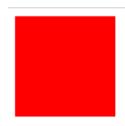

插入一个红色方块,并在箭头移入红色方块中时变成更大的蓝色方块,鼠标移除方块时,再度回到初始 的红色方框样式:

1、打开sublime text 键入以下代码:

```
<!DOCTYPE HTML PUBLIC "-/W3C//DTD HTML 4.01 Transitional//EN"</pre>
    "http://www.w3.org/TR/html4/loose.dtd">
<html xmlns="http://www.w3.org/1999/xhtml" >
<head>
<meta http-equiv="Content-Type" content="text/html" charset="utf-8" />
<title>JavaScript</title>
<style type="text/css">
     #div1 {width: 100px; height: 100px; background:red; }
.boxs
 {
   width: 200px;
    height: 200px;
    background:red;
}
</style>
<script src="/Users/huhuhu/Desktop/sublime文件/JS/jquery-3.2.1.min.js"</pre>
<script type="text/javascript">
window.onload=function ()
{
    var oDiv = document.getElementById('div1');
    oDiv .onmouseover=toGreen;
    oDiv .onmouseover=toRed;
}
function toGreen()
    var oDiv1 = document.getElementById('div1');
    oDiv1.style.width='200px';
    oDiv1.style.height='200px';
    oDiv1.style.background='green';
}
function toRed()
```

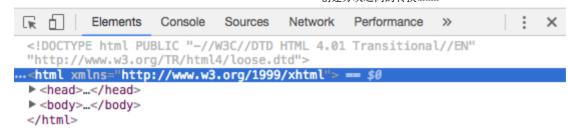

```
{
    var oDiv1 = document.getElementById('div1');
    oDiv1.style.width='100px';
    oDiv1.style.height='100px';
    oDiv1.style.background='red';
}
</script>
</head>
<body>
    <div id="div1" onmouseover="toGreen()" onmouseout="toRed()"></div>
</body>
</html>
```

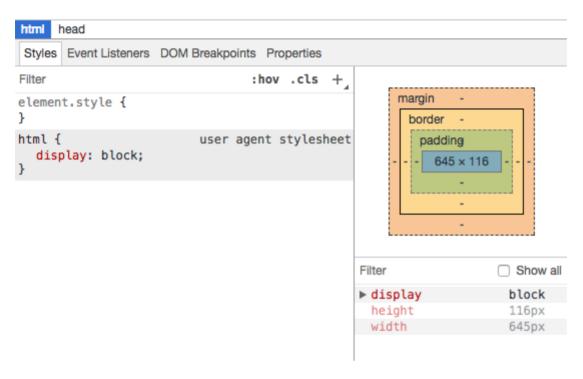

• 显示为, 但是鼠标移入方块范围内时, 无法改变其形状和颜色

• 此时在浏览器页面空白处单击右键,选择"检查",弹出代码检查的窗口,出现如下错误;

```
Styles Event Listeners DOM Breakpoints Properties
Filter
                                   :hov .cls +
element.style {
head {
                           user agent stylesheet
  display: none;
```

```
html
     body
Styles Event Listeners DOM Breakpoints Properties
Filter
                                    :hov .cls
element.style {
body {
                            user agent stylesheet
  display: block;
  margin: ▶ 8px;
```

没有查找到相关的解决方案, 所以更换了另一种代码的结构来实现此操作:

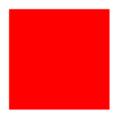

2、更换结构后的代码为:

```
<!DOCTYPE html>
<html>
<head>
    <title>JS特效测试</title>
   <meta charset="utf-8">
   <style type="text/css">
        .div1{
           width: 100px;
           height: 100px;
           background-color: red;
                    /*设置初始方块的形状和颜色*/
       }
   </style>
   <script src="/Users/huhuhu/Desktop/sublime文件/JS/jquery-3.2.1.min.js"</pre>/script>
   <!--引入jQuery文件(javascript框架)-->
   <script type="text/javascript">
       $(document).ready(function(){
       //设置编辑function函数
           $(".div1").hover(function () {
               $(this).css('background-color','blue');
               $(this).css('width','200px');
               $(this).css('height','200px');
                  //鼠标放在初始方块上时变换为蓝色的大方块
            },
           function () {
               $(this).css('background-color','red');
               $(this).css('width','100px');
               $(this).css('height','100px');
                 //鼠标移除方框时,又变回初始方框的样式
           });
       });
   </script>
</head>
                                                                 generated by haroopad
```

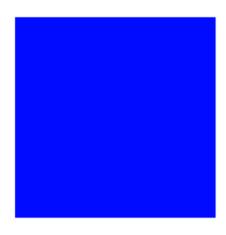

```
~DOUY~
   <div class="div1"></div>
</body>
</html>
```

• 保存后,在浏览器中打开新的.html文件,该代码成功得显示了预期的效果;

初始状态: 红色方块

鼠标移入: 蓝色大方块

鼠标移出: 变回红色方块
